Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Art in view of Korte et al (US. Pat. No. 6,371,126).

Applicant admits, in the instant specification, under the "Background Art" section, all that is recited in the claims except for a dust-cleaning means located along the conveying path, wherein a sucking force is produced through a suction opening which is positioned along the conveying path such that it overlaps a passing area of the filter and extends in a path direction of the conveying path. However, Korte et al discloses, in its "Background of the Invention" section, that in the cigarette making process, dust evolves from the filter-attaching processing step. As a result, dust recovery systems are generally provided wherein a vacuum attached to the filter-tip attaching section is used to suction dust and light tobacco particles and transport them to a dust collection container. (see col. 1, lines 9-33). Therefore, it follows that one having ordinary skill in the art would be motivated by this statement to provide a dust-removal means along the conveying path of the intermediate product, at least in a passing area of the filter, which includes a vacuum device positioned in such a manner as to remove dust particles generated through the operation of the filter-attaching device, in

order to remove, perhaps for re-use at a later time or application, the tobacco dust evolved from the filter-attaching process.

Allowable Subject Matter

3. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
